

VIVIDS NEW TECHNOLOGY

A worldwide unique **THERMOGRAPHIC TECHNOLOGY**, which allows the colour palette, patterns and images on surfaces depending on the temperature.

Thanks to its properties, thermographic technology finds application in many areas of life, enabling the creation of **durable and functional products** that meet the highest quality standards. This is a solution worth considering, regardless of the industry in which we operate.

Our technology is used in the **bathroom fittings** and **ceramics industry**.

Due to the **technology's high adaptability**, it is possible to apply the print to even the most complex shapes while maintaining high wear resistance.

VIVIDS NEW TECHNOLOGY

Our technology allows for **dynamic changes in color and patterns on the surface of objects in response to temperature changes.**

With the ability to set the variation over a wide temperature range (from 10°C to 65°C), **we can apply up to five layers of patterns**, offering limitless personalization possibilities.
